

# DOUBLE-ALPHA ACADEMY

PROMOTING EXCELLENCE IN **IPSC SHOOTING**.

## PRODUCT CATALOGUE **2019**

WELCOME TO  
**DOUBLE-ALPHA ACADEMY**  
LEADING THE WAY IN IPSC INNOVATION!

When I established Double-Alpha Academy seventeen years ago, I ran it as a one-man operation from my small home in Eindhoven. My primary goal was to sell the goods I received from my generous sponsors, while traveling extensively to compete, coach and teach the sport I love.

The very first product we ever made was our DVD/VHS production of the 2003 USPSA Nationals. More than fifteen years have passed since then, and how things have changed! I could never have foreseen how DAA would expand and grow into the brand it has become, and I am most thankful and appreciative of the support of our customers and friends worldwide. It has been quite a journey.

Today, DAA is one of the leading brands in our sport with dozens of innovative products ranging from holsters and pouches to reloading accessories and electronics. It has also been our privilege to represent and distribute products from other leading brands in our industry, companies like Mark 7 Reloading, Dillon Precision, and Competitive Edge Dynamics, to name just a few.

The 2019 Catalogue is very different from previous versions. I came to realize we were expanding our catalogue year by year, adding new products and trying to provide a comprehensive description of every product we sold. An impossible task. And besides – that’s what the website is for! This year we are doing things differently. The catalogue will not elaborate on product details or prices, information that is updated online. Instead, it is designed to give you an overview of the main product groups and brands we carry, and hopefully to whet your appetite and entice you to visit us online. Follow the numerous QR codes found throughout for direct links to the products and videos.

Thank you as always for allowing us to be a part of your shooting success!

Sincerely Yours,  
Saul Kirsch  
Double-Alpha Academy

# THE ALPHA-X LINE TAKING IT A STEP FURTHER

Double-Alpha has had a strong presence in the competition holster market since the introduction of the Race Master line in 2010. You would be hard-pressed today to shoot on a squad anywhere in the world without at least one person using a DAA rig.

But since we do not believe in settling for “good enough”, the Race Master line has been upgraded several times over the years. At the Europeans in 2016 we launched the new Alpha-X Holster which totally re-engineered the Race Master chassis, creating a much-improved performer.

The **Alpha-X Holster** boasts an all-aluminum assembly with a larger ball joint, offering a wide range of tilt and angle adjustments with rock-solid lock up. The extensive height adjustment is achieved via a rail on the side of the holster body itself. This eliminates the longer vertical rod and creates a more rigid sturdy design. The two-piece hanger assembly allows for quick release and reassembly, which is perfect for saving space when traveling. Take it apart and reassemble in seconds without losing any of your holster adjustment settings!

The Alpha-X Holster uses the same Delrin interchangeable insert blocks as the Race Master Holster. These can easily be swapped out, giving you full flexibility. One holster can be used with more than forty gun types currently supported. Several accessories are available too, including an optional “click on” thigh pad, a wide bracket belt hanger and an assortment of color inlays for personalization of your holster. A muzzle support extension rod is another optional extra.

The **Alpha-X Pouches** are a true evolution of our Racer and Race Master lines. We’ve taken the best of each and combined them in an improved innovative design.

The 360-degree wraparound interchangeable inserts mean your mag tube contacts only plastic for a slick and fast draw. The aluminum pouch body looks striking and provides the structural strength required for the rail attachment system.

The pouches are fully ambidextrous and allow for bullets-out mounting as well. All spacers required for double stack small, medium and large magazines are included.

A first-ever magazine seating depth adjustment feature lets you decide how deeply your magazine sits, creating a perfect fit for different tube lengths.

Different color inlays are available, as are optional accessories like single stack spacers and wide belt brackets.

# THE RACE MASTER LINE READY FOR THE RACERS

Popular the world over, the Race Master Holster and Pouch have become the most widely used competition rig on the market today. From beginners to champions, this rig beats all its competitors to the finish line!

The all-aluminum chassis of the **Race Master Holster** delivers strength and rigidity while providing a wide range of settings in all directions. Designed to be adjustable when worn, setting up is quick and easy and once locked, the holster holds its position and does not creep or come loose as do so many plastic holsters.

The interchangeable patented locking blocks enable a quick short release motion with very little resistance and total security when the lock is engaged. The lock is strategically positioned to allow quick access as you close your grip around the gun, making it possible to start locked should you want to.

The magnetic insert blocks are available for all popular guns in our sport. Over forty gun types are supported, from STI to Tanfoglio, CZ to SIG. This unique interchangeable block design makes it quick and inexpensive to switch gun types while using the same holster, and is a great inventory advantage for our dealers.

The **Race Master Pouch** uses a sturdy aluminum extrusion body and plastic inserts to obtain a perfect fit and smooth release combined with a striking appearance. A ball joint incorporated into the belt attachment allows swivel as well as tilt adjustment for perfect positioning. Ambidextrous and versatile, the Race Master is the go-to pouch of choice for serious competitive shooters worldwide.

A wide range of accessories and options is available for the Race Master Holster and Pouch, as well as a choice of several anodized colors.

# THE NEW RACER-X LINE TOP PERFORMANCE AT AN ENTRY-LEVEL PRICE

The recent introduction of the **Alpha-X holster** and its excellent performance motivated us at DAA to see if we could incorporate some of those improvements into the Racer holster too, without forcing a huge price increase.

And we are very proud to say – Yes, we can!

Introducing the all new **Racer-X holster**, which brings the improved performance of the Alpha-X hanger assembly to the Racer holster, while maintaining its attractive, affordable price point.

The all-new Racer-X hanger utilizes the same type of ball joint and rail system from the Alpha-X, attaching directly to the side of the holster body, eliminating the long vertical rod and the use of grub-screws to lock the ball joint. This improves the holster's stability, rigidity and ability to make minute adjustments. The lower part of the belt hanger is so similar in design to the Alpha-X, that the optional thigh pad from the Alpha-X can be used on the Racer-X as well.

The Racer-X Holster uses the same patented quick release and secure retention system that the Race Master and Alpha-X lines utilize, but without the aluminum body and interchangeable blocks. In the Racer-X Holster, the insert block itself is the body. This saves dramatically on production costs while not compromising on performance. You do, however, lose the ability to swap out insert blocks for various gun types.

The Racer-X's aluminum hanger is slimmed down but still offers the same wide range of adjustments and secure firm lock up of the Alpha-X Holster

The **Racer Pouch** is lightweight and holds the magazines in the same manner unique to the DAA brand. Tension from the spring-loaded pressure plate presses on the flat back of the tube, ensuring smooth consistent pressure on the draw. These pouches are angle adjustable, ambidextrous, and can be mounted bullets-out too. They are available in an assortment of colors and ship with a full set of spacers for all double stack magazines.

## PDR PRO-II KYDEX, **ANYONE?!**

Race Holsters are great but not always suitable for everyone. In some divisions of certain organizations, closed-body type holsters are mandatory. And there are many competitive shooters worldwide who prefer the more practical and everyday compatibility of a closed-body holster. Many competitors in our sports compete in order to sharpen their self-defense skills, and they want to use gear that more closely resembles their customary carry setup.

Our PDR PRO-II Kydex Holster is available for many popular gun types for right-handed and left-handed shooters. It offers a fully adjustable ball joint incorporated in its hanger, allowing you to position the holster exactly to suit your draw motion and style. The wide hanger is designed to be used on belts up to 2" wide.

The Hanger is ambidextrous, working equally well for RH or LH shooters. A huge range of vertical height adjustment is made possible using an aluminum rail attached directly to the side of the Kydex holster body. The holster body itself has two tension screws to adjust the retention setting to best suit your needs on each particular stage. The upper screw is a thumb-screw, which can be turned by hand for quick, toolless adjustments.

We've not neglected our friends in IDPA either! We offer a full line of IDPA legal holsters, pouches and leather belts.

So whatever your competition needs – we've got you covered!

## GOING MAGNETIC GETTING THINGS TO STICK!

Many years ago, Double-Alpha was the first company to offer a large-magnet pickup pouch.

Since then we have created an extensive line of Magnetic Pouch carrying solutions, ranging from the original Pickup Pouch to our bullets-out solutions for various types of magazines, standalone pouches and options for adding magnets to traditional pouches.

While not permitted in all USPSA divisions, magnetic pouches are allowed in IPSC and are favored for their versatile and simple use. The magnetic retention solution often allows shooters to transition from one type of magazine to another the need to make any change at all to their mag pouch setup. One must, however, bear in mind that some magazines are made of stainless steel or are plastic coated, which can make them incompatible with magnetic retention solutions.

You can say that we are serious fans of the magnetic solution, incorporating magnets in our Shotshell Holders, Holster Insert Blocks and, most recently, in our Grip Lotion Holders too!

# SHOOTING BELTS MUST DO MORE THAN JUST HOLD UP YOUR PANTS

Any experienced IPSC shooter will tell you that your Shooting Belt is probably the most important item in your rig. No matter how good your holster or pouches may be, if your belt is sub-par, the other gear cannot perform as it should.

A Shooting Belt must be firm and rigid, able to carry the weight of the holstered pistol and loaded mags securely as you forcefully run through the stage. It must be an inner/outer Velcro system belt that enables you to set up your gear and leave it in place locked to the outer belt.

Our **DAA Premium Belts** offer the most rigid outer belt available on the market, teamed with a thin efficient inner belt. This 1.5" belt system, with its hard PVC inner core, smart two-tone external webbing, name tag holder and rubberized belt security loop, has become the gold standard on IPSC/USPSA shooting ranges the world over.

IDPA has its own set of rules and does not allow the use of competition-style inner/outer Velcro belt systems. To meet the needs of our IDPA customers, we offer a quality, heavy-duty leather belt, suitable for everyday carry as well as for when the timer beeps.

# SPECIALTY RIGS A TO Z SOLUTIONS

Double-Alpha Academy offers more than just holsters and magazine pouches to mount on your shooting belt. Also available are a wide selection of **shot-shell ammo holders**, **Revolver Moon Clips** and **Magnetic Moon Clip Holders**, **AR-15 magazine pouches**, **Grip Lotion Holders**, and more. If you need to carry it on your belt into competition – chances are Double-Alpha offers the most innovative and practical way to do so!

We have 3-gunners covered too, with our **Alpha Rail quick release system** and more recently adaptor plates for the ELS Belt System. Now ELS fans as well can easily use all the DAA pouches on their belt.

Our **AR-15 pouches** utilize the same proven design as our pistol Racer pouches. The tension from the back of the magazine provides the most secure hold and the smoothest release. The pouch body design enables you to seat the magazine facing either left or right, making this pouch perfect for both right- and left-handed shooters, and lets you choose how to orientate your magazines to suit your reloading technique.

Our **Quad Loaders** and **Twin Quad loaders** offer a truly innovative design, which utilizes magnetic retention on the upper shells and a tension clip on the lower shells, for a solid hold and a smooth extraction. Our Quad loaders incorporate large adjustment wheels which can be loosened by hand to move the upper retainer up or down on the fly, to fit the length of your shells to be used on your next stage.

Both our AR-15 Pouches and our Quad and Twin Quad loaders are supplied with our Alpha Rail System as their standard hanger of choice.

# SHOTMAXX-2

## A SHOT TIMER LIKE NO OTHER

The **SHOTMAXX-2** from DAA is a truly unique product and a one-of-a-kind shot timer. It can do everything a larger hand-held timer can do, and more!

Perhaps the most unique feature is the choice of an acoustic sensor (common to all timers) or an accelerometer sensor. When using the accelerometer sensor, the SHOTMAXX-2 picks up YOUR shots only, ignoring those fired right next to you on the line. This is a particularly useful capability when you're training on a busy range and want to record your own split times only.

The SHOTMAXX-2 offers increased battery life, a larger, louder and more robust buzzer, string memory for up to 10 strings of 99 shots and a multitude of other interesting settings.

The exclusive accelerometer ability in Spy Mode allows you to record your own split times and transitions during competition without interfering with the official RO timer. When you set the Spy Mode on, and press START just before assuming your start position on a stage, the timer will wait to feel your hand motion as you respond to the Beep of the RO's timer. It will then start the clock on your SHOTMAXX-2, even compensating for your pre-determined reaction time, and record your shots as you shoot your stage. This will allow you to leave the stage with a complete record of all your shots fired.

The SHOTMAXX-2 offers all the features you would expect from a digital watch, including 12/24hr time display, date, alarm options, stopwatch features and even a walkthrough countdown clock of 3 or 5 minutes.

Accessories include colorful silicone skins, custom carry case, charging packs, and more.

# CED7000 TIMERS AND ACCESSORIES

The **CED7000 Shot Timer** is a joint venture between Double-Alpha and Competitive Edge Dynamics. Developed more than a decade ago, this timer has become the most popular shot timer in history, and for good reason. Its small, lightweight package is comfortable and easy to hold and carry, and the advanced reliable shot detection algorithm and digital sensitivity options produce excellent shot-detection results.

Leading features include string memory, multiple advanced PAR options, a loud beep with volume settings, several START-delay activations, and full review options.

The CED7000 Shot Timer is available in full Black Tactical finish or with silver buttons and display bezel. Several accessories are available, including a Rotating Belt Clip, silicone skins, upgrade RF chips, screen protectors, and more.

The CED7000 small size is, in part, made possible by use of a lithium rechargeable battery. This battery, once charged, will offer a long standby life and approx. 20 hours of continuous range use. Enough to get through any day of intensive RO use. The timer can then be recharged using any USB outlet using the included dedicated USB charge cable, or using the included wall outlet charger.

When utilizing the optional RF chip, the CED7000 communicates with the CED Big Board, displaying each shot fired in real time.

The CED7000 Includes the following:

- CED7000 Timer
- AC Charger with adapter head
- USB Charging Cable
- Neck Lanyard
- Wrist Lanyard
- Instruction Manual

# CED CHRONOS

## RELIABLE REPEATABLE

## PERFORMANCE

CED chronographs have been used in most Level 4, 5 and USPSA National Championships for decades and for good reason! They are reliable, accurate and easy to operate.

The current CED M2 chronograph is the official chrono at most big matches. It can be used both outdoors in natural light and indoors using the optional Infrared Screen Set. The M2 records velocities ranging from 50 to 7000 fps and stores over 1,000 shots in its onboard memory, ready to be downloaded via USB to the available PC app for further storage or analysis.

The 9v battery-powered Main Unit offers large rubberized buttons, the industry's largest LCD display and a multitude of calculation options. You will find no other device easier to use or more effective. Twenty-foot cables allow you to position the Main Unit back from the screens, convenient for maintaining a safe distance from the sensors when testing hi-velocity rifles.

Whether you are a pistol or rifle shooter, an archer or a paintball enthusiast, the large shoot-through window available on the CED M2 is ideal for your needs. And the optional custom-made carry case is the perfect way to pack away and transport your chrono.

Later this year, CED will launch the ARC Chronograph, an all-new model which uses Laser light technology to completely resolve any lighting or muzzle blast issues.

# CED/DAA RANGE BAGS AND ACCESSORIES - FOR ALL YOUR SHOOTING RANGE NEEDS

For more than thirty years Competitive Edge Dynamics (CED) has led the way in design and innovation of range bags with their supporting textile pouches and gear. You'd be hard-pressed to shoot on a range anywhere in the world without encountering this leading brand.

In 2011, DAA and CED joined forces to develop our **CED/DAA RangePack Pro** and **medium RangePack**. These have since become our top-selling bags and are the choice of thousands of serious shooters around the world. Loaded with custom-designed features and accessories, the bags are built from the ground up by shooters for shooters, meeting and exceeding user expectations.

CED also offers various models of shoulder carry bags, from the **largest XL model** through the **Deluxe Professional and Professional** designs. Offered in a multitude of colors, these bags team up with a wide array of pistol pouches and sleeves, ammo pouches, magazine-storage solutions and much, much more.

When it comes to textile solutions on the range, CED has you and your gear covered! All CED textile products are made using only first grade hi-end materials and top-quality zippers. The designs are extensively tested on the range prior to production to ensure that we get it right the first time. Your guns, magazines and accessories are expensive, hard-to-replace items. Make sure you provide them with the secure storage solution they need.

# DAA HARD CASES PERFECT PROTECTION FOR YOUR VALUABLES

While pistol sleeves and soft-sided bags are practical on the range and in your range bag, nothing beats hard cases for keeping your weapons safe and secured.

DAA offers a **wide selection of Hard Cases** in various sizes. All our cases are IP67 certified, tough, durable and reliable. They provide perfect protection from the elements and safeguard against impact or compression damage in transit.

Our cases have two-piece clasps making opening and closing as smooth and easy as possible. The handles are rubberized and flexible for carry comfort, and all cases include eyelets for locks and automatic pressure valves. Precut cube foam as well as layers of eggshell foam is included for easy customization. Cases are available in Black or Orange.

# RANGE CARTS OF ALL TYPES - KEEPING THINGS ROLLING

A good cart can be the shooter's best friend on a large range. A lot of gear and ammo needs to be moved during a competition, not to mention the convenience of a chair or a practical way to hold up your umbrella.

Double-Alpha offers an **assortment of carts**, all designed and configured for use on the range. Our RangeCart Pro is compact and lightweight, suited for rough terrain and perfectly shaped to carry CED/DAA backpacks or range bags. It has many convenient custom features, such as bottle holders and a fold-out tray for your ammo box as you load your mags.

Our **4-wheel All-Terrain Cart** is larger and ideal for carrying large amounts of gear over any surface.

We also offer the **Eckla Multi Rolly**, a popular high-end choice.

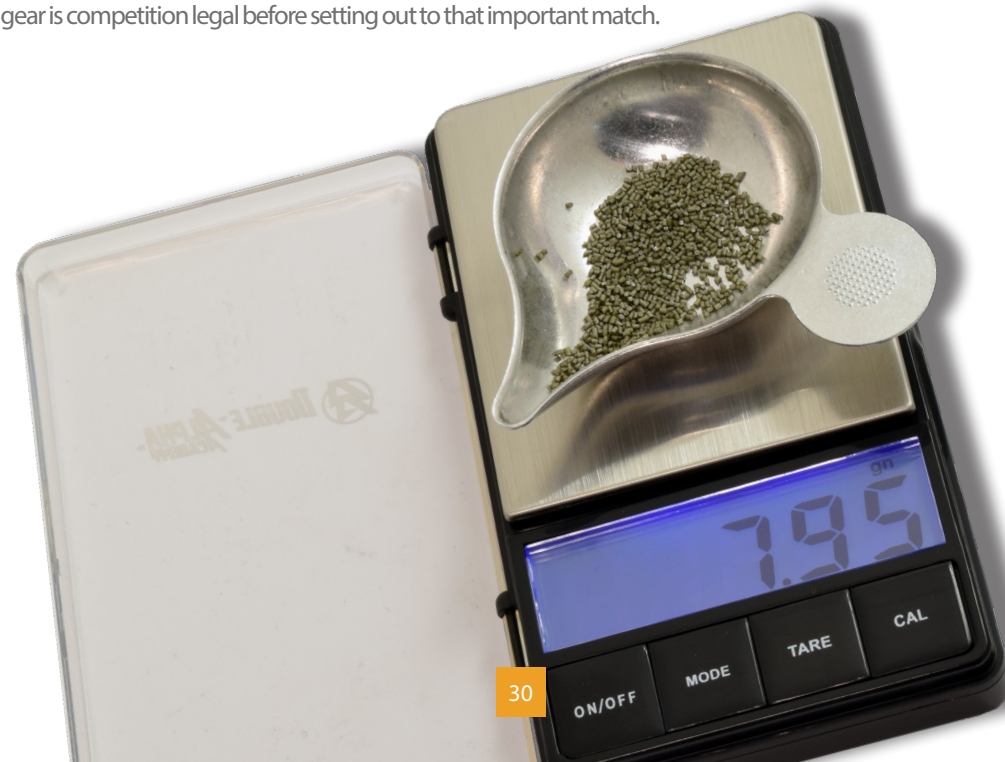

# GAUGES AND TESTING GEAR ENSURING ALL IS TO SPEC

Reloading your match ammo is not something to be taken lightly. And so, to ensure the quality of your reloaded ammo, Double-Alpha offers a selection of products to help you with quality control. Several types of **Bullet Gauges** are available for drop testing, as well as an assortment of **powder scales** and measuring equipment.

But it's not only your ammo that has to be confirmed competition ready! Double-Alpha offers the most widely used **Standard Division Measuring Boxes** and **International Magazine Length Gauges**. Own them, so that you can confirm all your gear is competition legal before setting out to that important match.

# DAA RELOADING ACCESSORIES ADDING THE EXTRA TOUCHES

Over the past few years, reloading accessories have become a larger and larger segment of our product line. From our industry-leading bullet feeders to our assortment of accessories for the Dillon 550, 650 and 1050 machines, we are constantly working on new ways to improve your reloading experience.

Since introducing our **Mini Case Feeder for the XL650**, we have repeatedly been asked for an inexpensive solution for **Dillon 550 feeding cases**. This was, of course, a more challenging undertaking as the XL650 already incorporates a case feeding mechanism.

This year we are proud to announce the launching of our **550 Mini Case Feeder**. It should be available by summer 2019 and will be a game changer for 550 reloaders.

From **kinetic hammers** to **hi-cap powder hoppers**, **primer output chutes**, **click-adjustable knobs** for the powder dropper, **Powder-Spill-Prevention brushes** and much more, Double-Alpha has your reloading needs covered!

Reloading

www

www

# MR.BULLETFEEDER RELOADING MADE EASIER

The most common reaction we get from reloaders who have added our **Mr.Bulletfeeder** to their reloading press is, "How did I ever reload without one?". Adding a bullet feeder to your press considerably lightens the workload and dramatically increases your output.

**Mr.Bulletfeeder by DAA** can be used to load almost any bullet profile. The only exception is full Wadcutters where the base and nose of the bullets are the same diameter. Jacketed, plated and even lead bullets can be used. Caliber conversions are quick to swap out and available for 9mm (which can handle everything from .380 to .357 mag), 0.40/10mm and of course 0.45 (which can also load .44 mag). Rifle conversion is available for 223, 308 and 6.5mm.

Mr.Bulletfeeder by DAA holds approximately 350-400 9mm bullets in its collator and outputs at speeds exceeding 3000 per hour. The gravity-operated dropper fits directly into a standard station on your toolhead, and requires no customization or changing of parts on your reloading press.

**Mr.Bulletfeeder PRO** is our larger unit, designed specifically for commercial grade or large-volume reloaders. It was created to meet the output speed and increased capacity of the Mark 7 Revolution, but it has become popular with many serious reloaders using other machines as well. The much larger collator can easily hold over 1000 9mm bullets or as many as 1500 223, and outputs at an astounding speed of well over 6000 per hour. In addition, the PRO unit includes an upgraded all-steel die, heavy duty dropper assembly, and a telescopic pole to support the large collator.

# THE ROLLSIZER MAKING BRASS NEW AGAIN

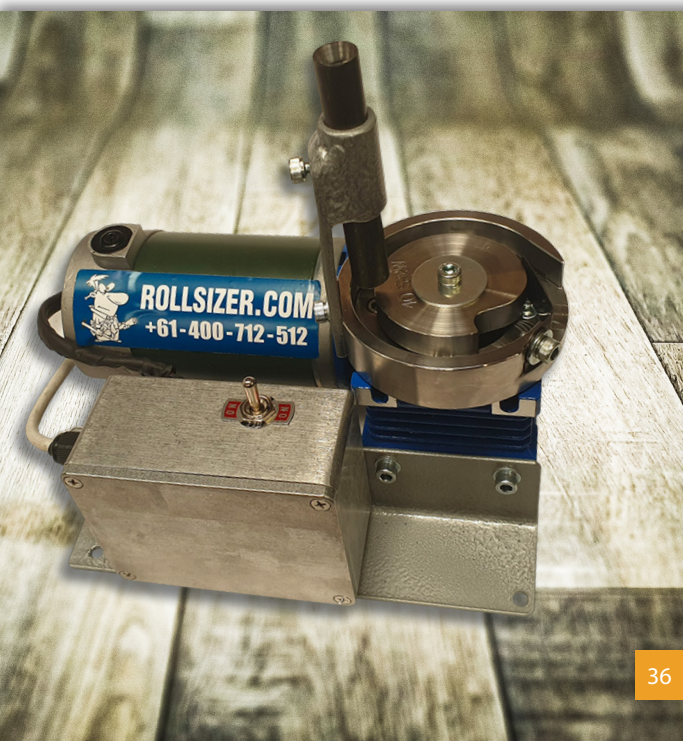

The industrial-strength **Electric Drive RollSizer** meets and exceeds the needs of any shooter, club or commercial reloader. Its powerful air-cooled AC motor and oversized gearbox mount directly to the sizing disc and base, ensuring ample power and accuracy. The hardened all-steel construction promises an almost limitless lifespan and will give you many years of reliable service.

The RollSizer effectively removes that bulge so often found on the lower third of a fired case, bringing your range brass back to spec when combined with standard reloading dies. Bulgy brass reloads like new and fits the ammo gauges when loaded. Your reloaded ammo will once again be reliable and competition ready.

Caliber changes are done in a matter of seconds by simply changing out the center disc and so changing the size of the sizing slot. (In some cases the feed tube and activation lever must also be changed.) The output speed of the machine (over 6100!!! rounds per hour) can be adjusted by adding or removing the activation bolts from the discs, to match the feed speed of your case feeder. A long plastic pipe allows you to hook up this unit to your case feeder or set it up with a dedicated case feeder (not included).

The **DC Drive Electric RollSizer** is a smaller version of its big brother, able to process approx. 1200 case per hour, and is suitable to meet the needs of most private reloaders. Its smaller size and reduced weight, not to mention lower price point, will make it a popular choice for many private reloaders.

The **Manual RollSizer** is a compact RollSizer operated without power or electric motors. A handy, fold-away handle allows the user to operate the machine manually by rotating the handle and feeding the cases through the sizer. Manually operated, it will process approx. 500 pistol caliber cases in about 30-40 minutes of cranking. Note that an electric-drill attachment should become available in the near future.

# BRASS MARKER GETTING MORE OF YOUR BRASS HOME

Shooting can be an expensive sport and reloading is the best way to reduce costs as the brass is the most expensive component of your ammo, and it can be reused. But in order to reload your brass – you first need to collect it!

Many shooters train in clubs with other shooters. At the end of a practice, when all the brass is collected, we often spend another half hour standing around a big pile trying to retrieve our own fired brass.

The best way to save time and quickly identify your spent brass, is to mark it before use. The common easy solution is to draw a line over the headstamps while in ammo boxes. The problem with this method is that you do not immediately see your color stripe when the brass is lying in a mixed pile. You still need to pick up each piece to examine the headstamp area. Not very effective!

Our new fully automatic **Brass Marker** is the ultimate solution to this problem. You simply attach the machine to your reloading press by using the large funnel (included). As you reload, the ammo feeds through the Brass Marker and is marked with one or two colored stripes of your choice. The stripe marks the entire circumference of the brass, so it is always immediately recognizable. You can even adjust the machine to mark in the extraction groove only.

# CED TORNADO & DRYER

## A BETTER WAY TO CLEAN BRASS

Wet tumbling, as a means to clean brass before reloading, has become extremely popular in recent years, and for good reason. Dust and corn media particles are totally eliminated. No longer are you required to purchase polishing or corn media. The steel pin media does not wear and can be used virtually indefinitely. But the most distinct advantage, however, is that it cleans the inside of the cases as well as the outside, giving a better overall result.

The **CED Brass Tornado** with its custom-made hexagon container is the most advanced wet tumbler on the market. Its program-mable features allow you to set the time, speed and agitation program that best suit your needs. The quick on/off sealing cap and sieve facilitate draining and rinsing. The wet tumbler makes less noise than a traditional vibratory tumbler does, making it more convenient to use indoors. And the hexagon shape of the container, combined with the advanced motion programing options of the CED Brass Tornado, complete the cleaning process with gleaming results faster and more efficiently than all other options.

The **CED Brass Dryer** is a compact practical electric dryer. Once removed from the tumbler and separated from the pins, hundreds of pieces of brass can be dried quickly and efficiently. The five trays hold approximately 150 pieces of pistol brass each and they are all completely dried in less than an hour. The 250 watts of drying power make for an effective and quick solution, and user-adjust-able temperature controls give you full control over the drying process.

# MARK 7 REVOLUTION

## WELCOME TO THE FUTURE

Have you been waiting for an affordable commercial-grade loading machine with the power and speed to achieve your personal or business reloading goals? Wait no more! The **Revolution™** is here!

Based on Mark 7's proven digital drive mechanism technology, the Mark 7® Revolution™ is a machine unlike any other on the market — a completely integrated new loading press of Mark 7's own design powered digitally and automatically.

The fully customizable platform offers output speeds up to 3500 rounds per hour. Its massive 10-station toolhead allows brass processing and reloading in a single pass, plus the use of a multitude of optional sensors and accessories. The amazing onboard primer collator and feeding system spells an end to primer tube filling, and offers reliable and safe large-volume primer input.

The **Mark 7 Revolution** ships assembled and ready to use. Conversion kits allow easy and quick conversion through an assortment of supported calibers. A lifetime of software updates is included as well.

For the absolute pinnacle of the reloading experience, look to the Mark 7 Revolution!

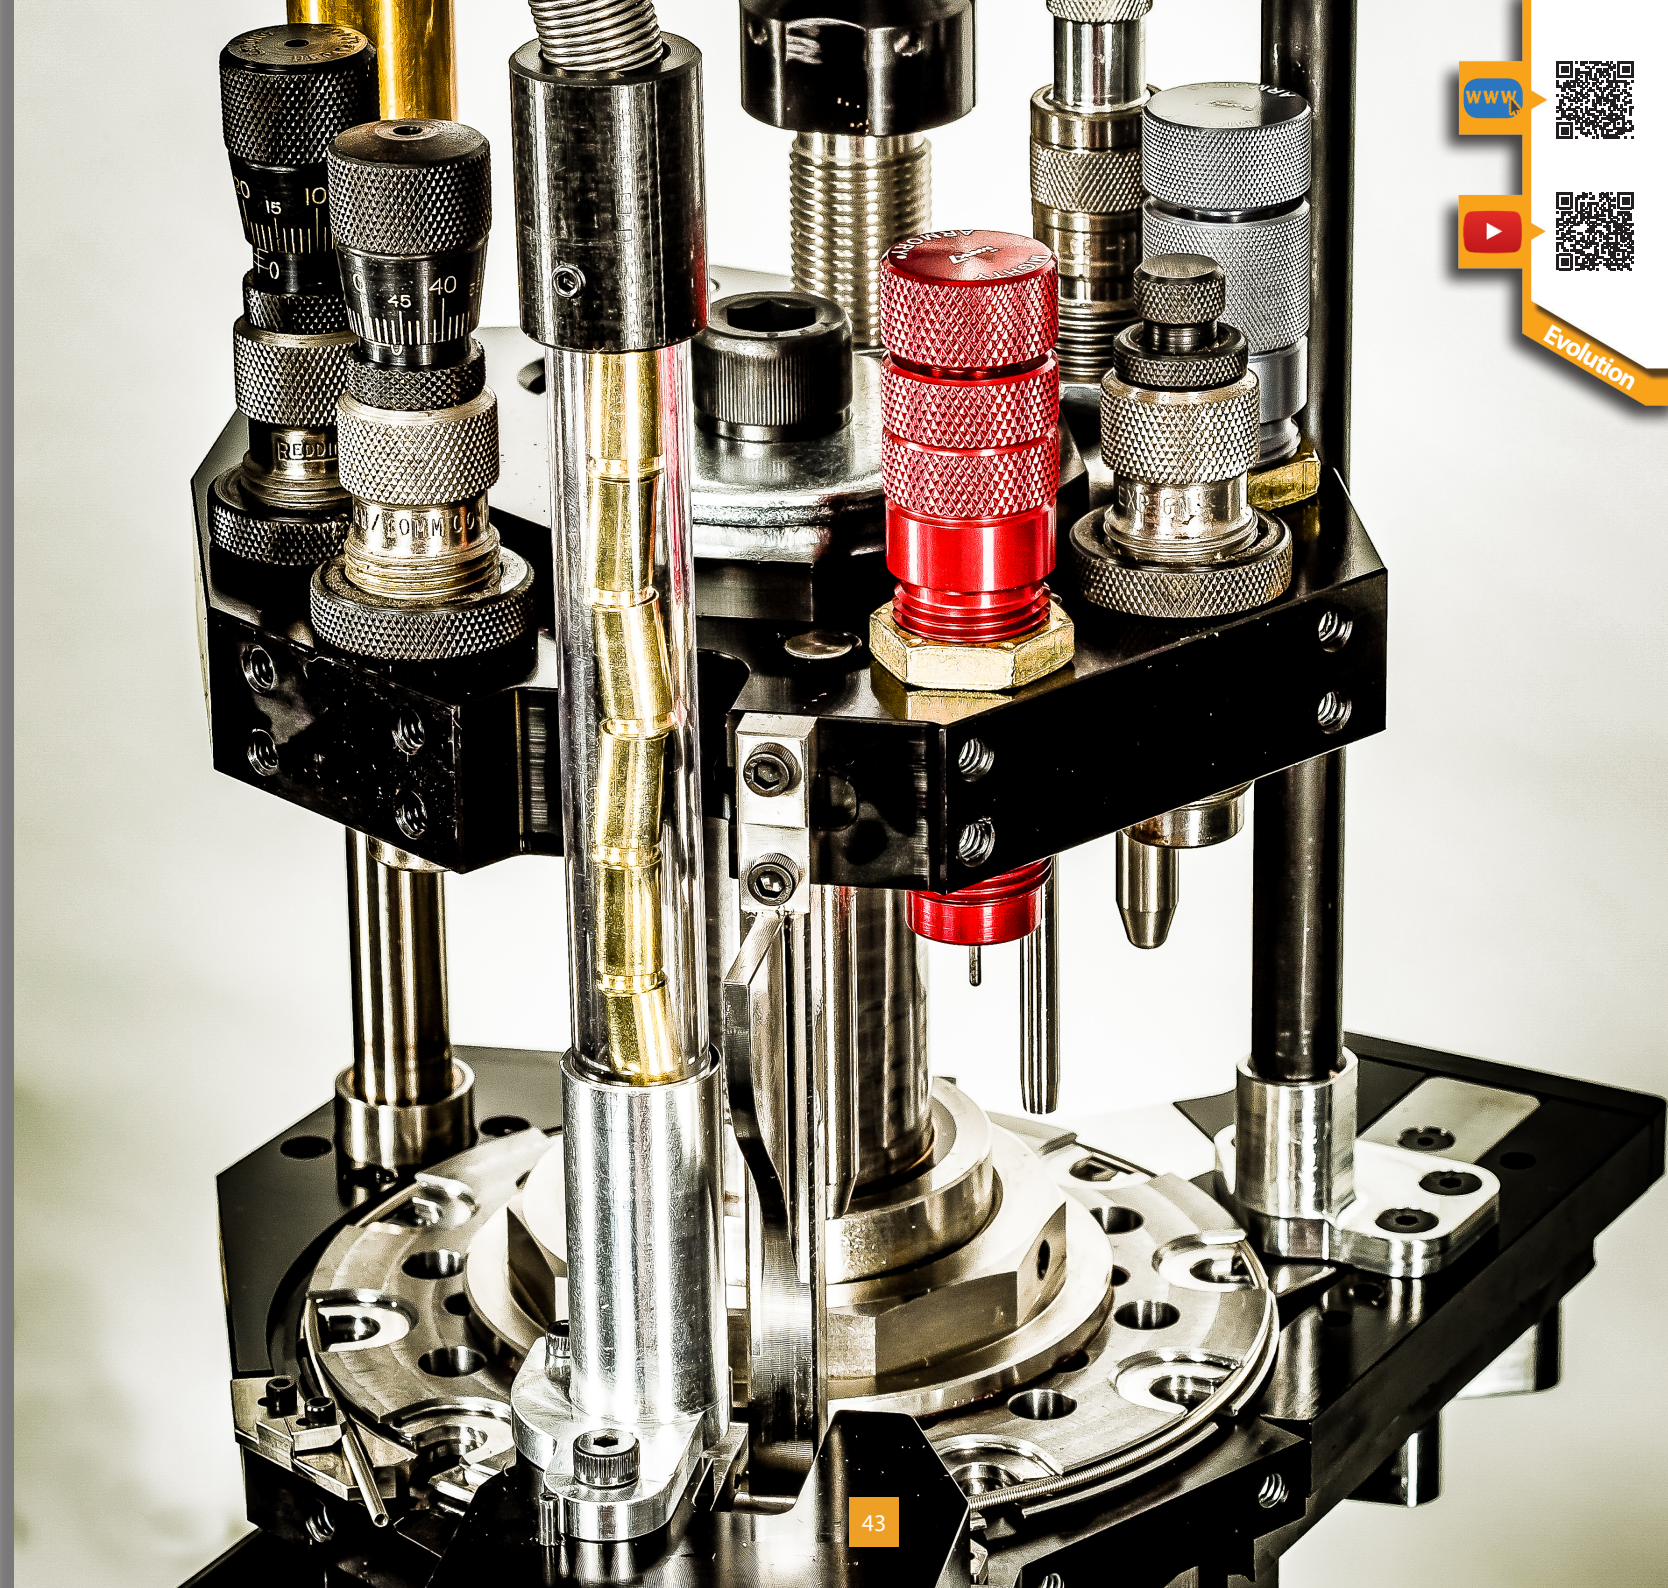

# MARK 7 EVOLUTION PROGRESSIVE PERFECTION

For over thirty years the Dillon 1050 has been the only option for the serious reloader wanting to own the best progressive reloading machine. But now all that has changed with the introduction of the new **Mark 7 Evolution**.

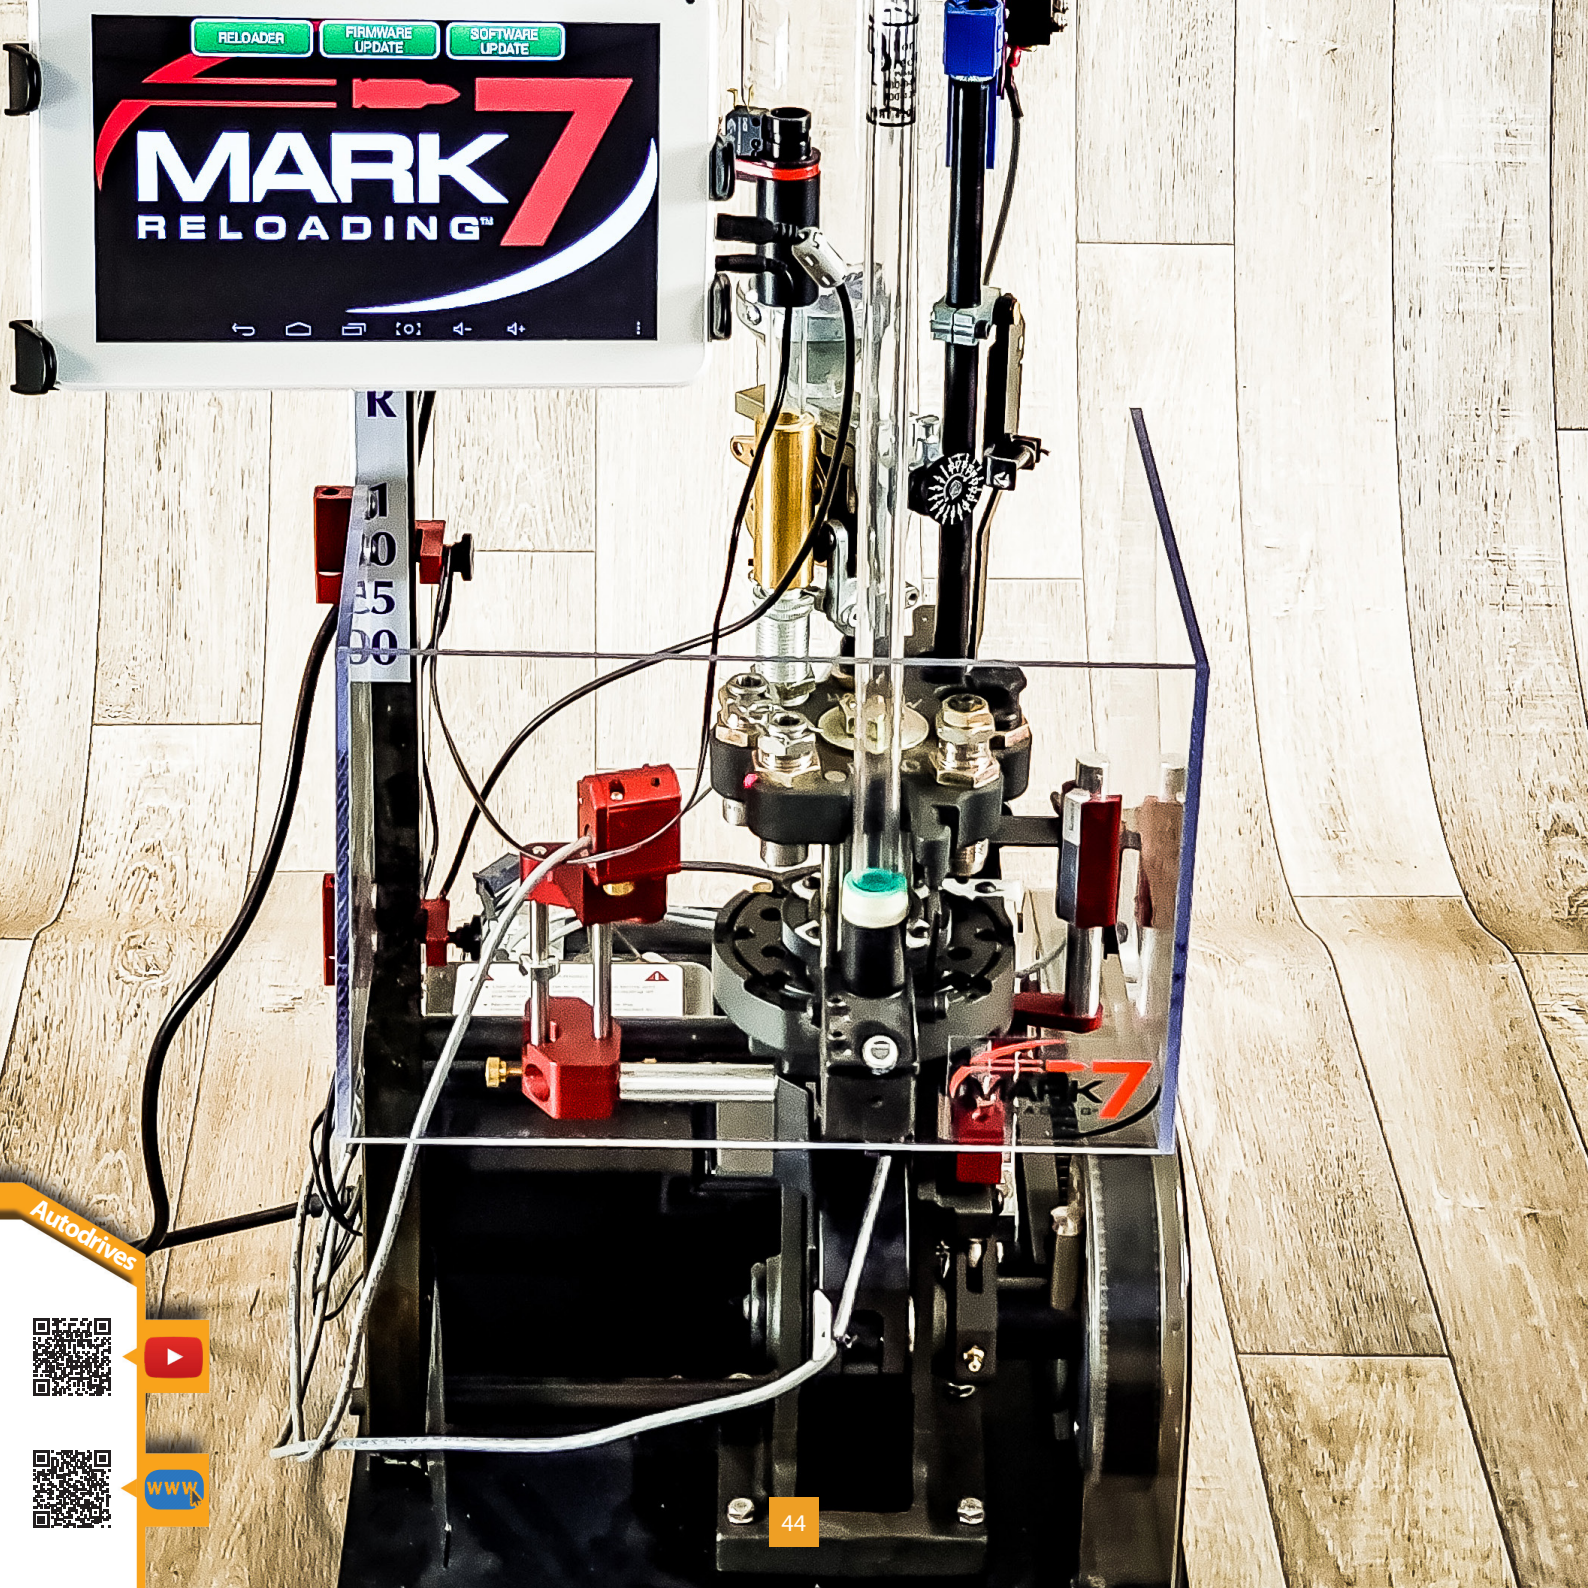

The Mark 7 Evolution takes the progressive reloader design a giant step forward, adding additional stations (10 in total), refining features and performance, and advancing quality and finesse. This does come at a cost, and the Evolution is considerably more expensive than the 1050. However, the quality and increased performance and speed will justify the investment for those who can afford it.

As is the trend with all Mark 7 products, the Evolution is designed to be upgradable, allowing you to add features and capabilities in increments. For example, you can add an autodrill to the manual Evolution, or an array of sensors, or install additional guide rods and accessories for rifle brass processing and reloading. The standard Stacked Primer System can be upgraded to the hi-end Automated on-board primer collator, and the case feeder and Mr.Bulletfeeder can be upgraded to larger models as well.

You can basically upgrade the Evolution machine step by step until its performance and features rival those of its big brother, the **Revolution**.

# MARK 7 AUTODRIVES - ALLOWING THE AMMO TO LOAD **ITSELF**

If you have never had the pleasure of watching your automated reloading press make bullets – you’ve been missing out! It is sure to put a smile on the face of every reloader!

**Mark 7 Reloading** leads the way in hi-tech digital **autodrives for the Dillon 1050 and XL650 machines**. They are available in a variety of power options, backed by a lifetime of software updates and a large array of optional sensors.

The Mark 7 Autodrives use hi-torque powerful step motors, which, when combined with the smart programming running in the controller and tablet, provide a wide range of adjustments and controls.

Digital clutch sensitivity controls the amount of force required to stop the machine. Customizable settings for the upper and lower dwell times, indexing speed, and overall cycle speed are all at your fingertips.

The optional **digital sensors** greatly assist in automating the reloading process by providing safeguards and stopping the machine when necessary. The **Optical Decap sensor** ensures the spent primer is ejected; the **Swage Sensor** confirms the primer pocket is clear and ready; the **Low Primer/ Powder sensors** stop the machine before you run out of primers or powder; and the **Optical Bullet Sensor** ensures a bullet is placed correctly on your case before it is seated. Advanced automation at work!

The Mark 7 Autodrive can be set up in minutes and offers speeds up to 2,400 rpm for the 1050 PRO model. Simply bolt your 1050 or 650 to the appropriate mounting points on the Autodrive system, attach and tighten the drive belt, and run the calibration process. You will be up and running in less than twenty minutes. Your reloading sessions will never be the same again!

# DILLON MACHINES THE SHOOTER'S CHOICE!

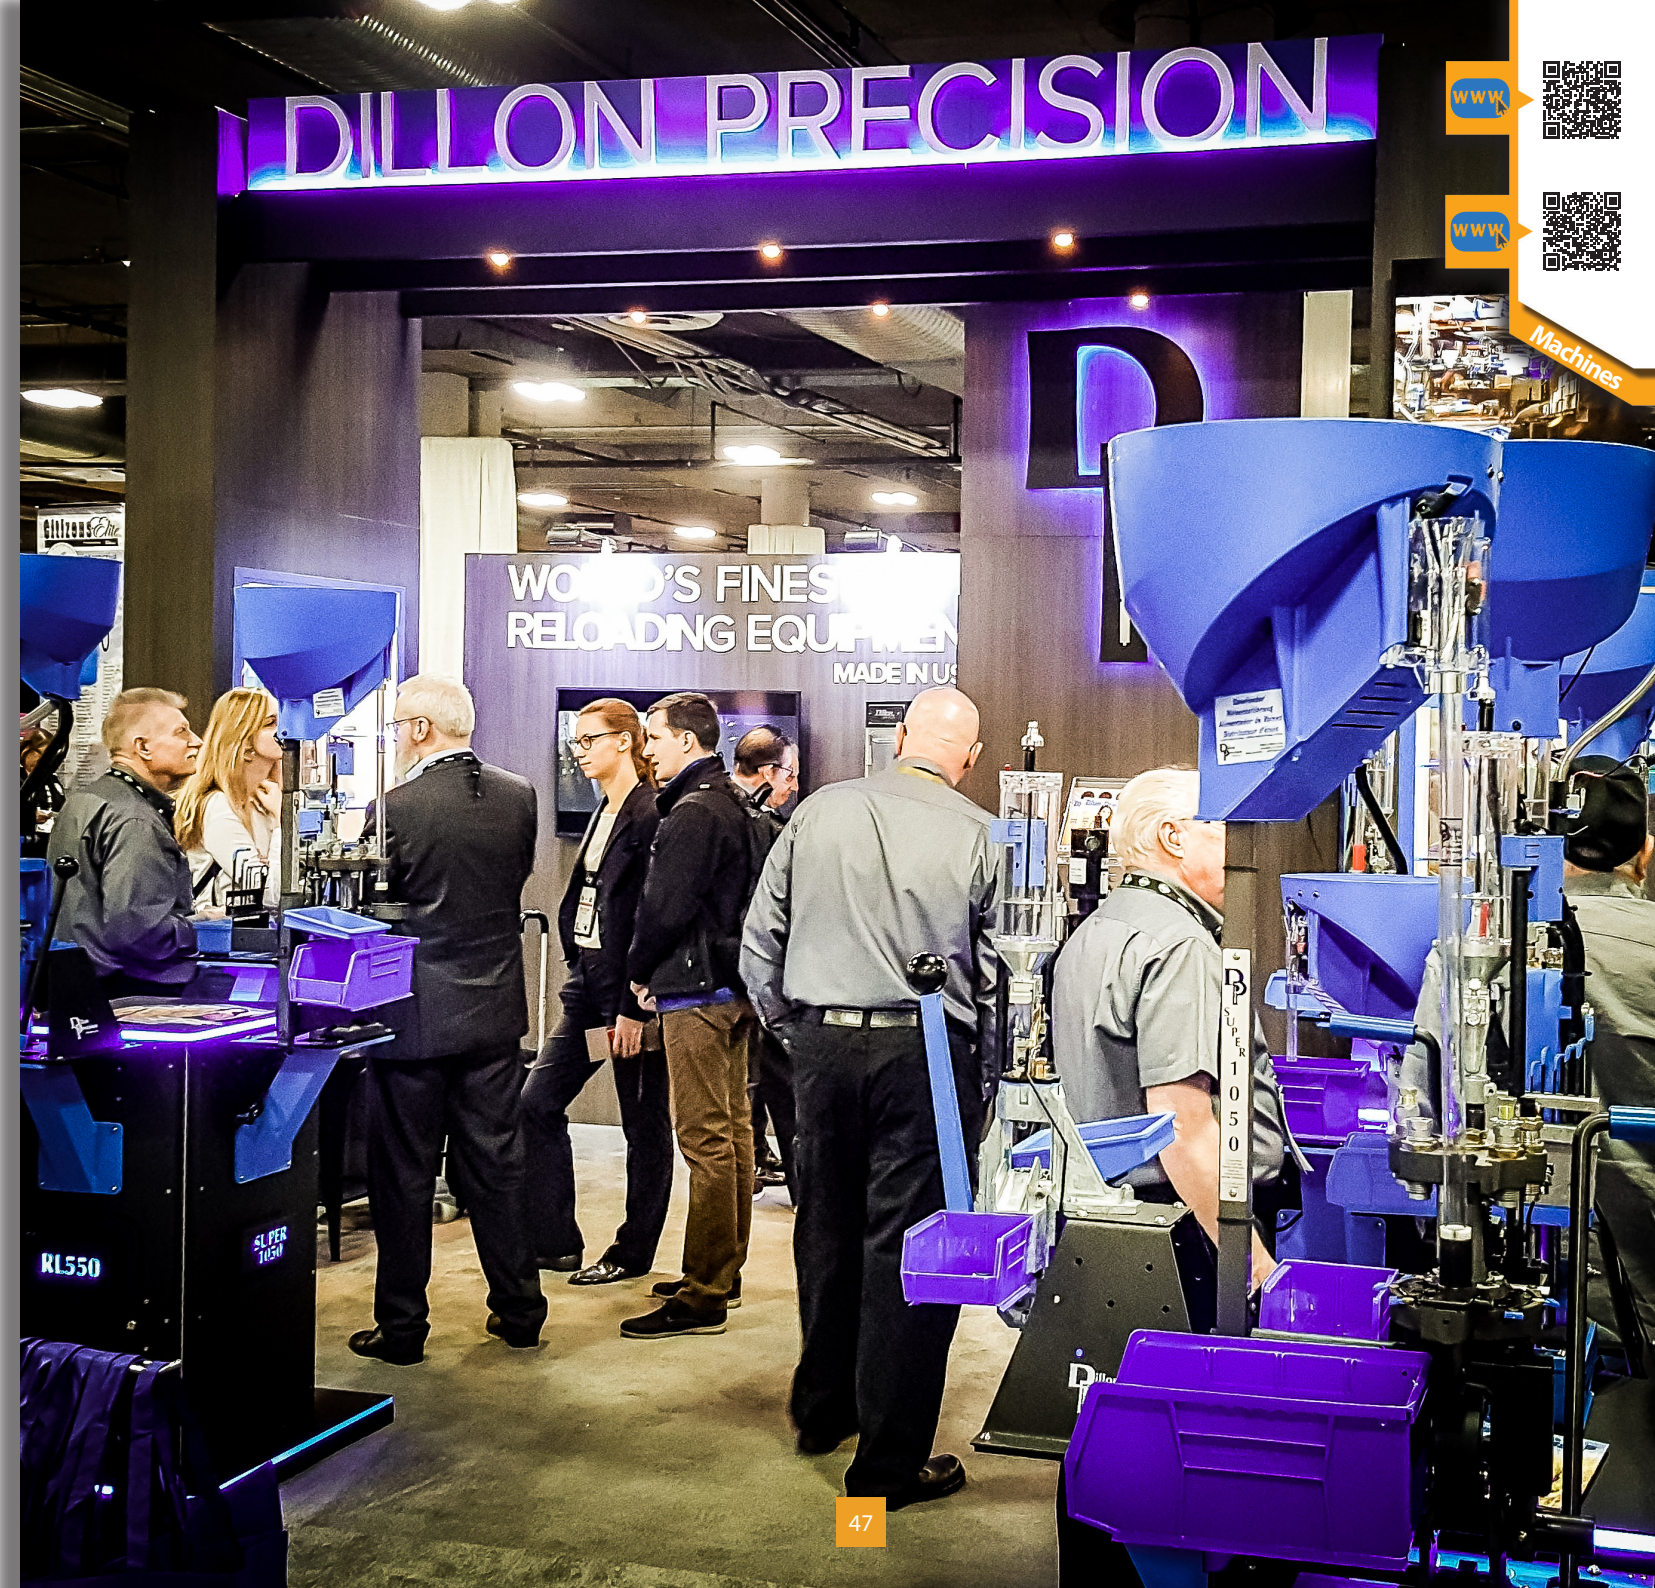

For decades **Dillon Precision** has led the way in producing the best reloading machines for personal use. The company's excellent product line and well-deserved reputation for "no-questions-asked" lifetime warranty support of their products, have made them the industry's favorite.

The **Dillon 1050** is the flagship of the Dillon Progressive line and can output close to 2000 rounds per hour when teamed with a **DAA Mr.Bulletfeeder**. The 1050 offers a large 8-station toolhead, with a static shell plate and moving toolhead for increased speed and performance. The 1050 includes dies and case feeder, and ships ready to use.

The **Dillon XL650** is the popular choice for serious reloaders looking for the right balance between price and performance. This 5-station machine reloads over 1000 rounds per hour when running smoothly with a DAA Mr.Bulletfeeder attached. The case feeder is optional on an XL650 but is added by most users. Dies are not included. A wide range of parts, upgrades and accessories is available for this excellent press.

The **Dillon RL550C** is an economical choice for a quality press capable of loading an astounding assortment of pistol and rifle calibers. Caliber conversions are quick and relatively inexpensive, making it a popular choice for shooters using and changing many calibers.

**Double-Alpha is proud to be the largest International Distributor of Dillon products.** We stock all the popular machine models and calibers, available for immediate delivery.

# DILLON ACCESSORIES AND PARTS - FOR ALL YOUR RELOADING NEEDS

In addition to the Dillon reloading presses, we are pleased to offer a wide assortment of Dillon parts and accessories.

**Conversion kits** are available for the **1050, 650 and 550 machines** and of course a wide range of pistol and rifle die sets. Spare parts and maintenance kits are available as well.

Case preparation is an important step in quality reloading, and Dillon makes an assortment of products to meet this need. We offer their **large and small dry tumblers** (in 220v), two sizes of **separators**, **Rapid Polish** and **Case Lube**.

Filling primer tubes is another important aspect of efficient reloading and we carry Dillon's best solutions. The fully automated **RF100 Primer Filler** (220v) is top of the line and can greatly reduce your workload by filling your primer tube while you reload. We also stock flip trays and extra primer pickup tubes.

Dillon Progressive Reloading Presses do come well equipped but there are always add-ons to make them even better! The **Strong Mount** is an excellent addition to a 650 or 550 machine, elevating it and making it more stable. The **Aluminum Roller Handle** is another popular upgrade that adds to comfort and productivity. **Powder Check Systems**, **machine covers**, **Quick Change Kits and Tools**, are just a few of the Dillon accessories offered by Double-Alpha.

# HEARING PROTECTION SAFETY **FIRST!**

In a noisy environment like a shooting range, it is vitally important to use top-quality well-fitting hearing protection to protect your hearing from long-term damage.

Many competitive shooters choose to use **Electronic Ears**, and for good reason. The electronics allow you to continue a conversation even while shots are being fired close by. The loud noise of the shots is filtered down while the vocal sounds are allowed through and even amplified. This is an extremely practical tool to have at your disposal as you shoot, train or coach.

Double-Alpha is proud to offer our own **Electronic Hearing Protection model EHP27**. These excellent middle-range Ears include silicone pads as standard and a luxurious **custom EVA carry case**. They provide top-notch performance and comfortable wear at a very affordable price.

We are also very pleased to offer a wide assortment of electronic hearing protection from **MSA SORDIN**, a Swedish brand whose products are second to none for quality, durability and performance. Several models are available in our store.

**3M Peltor's** hearing protection is well represented at DAA too, with models including their most popular electronic and passive muffs.

Whatever your budget and requirements for hearing protection – Double-Alpha has you covered!

# EYE PROTECTION SAFEGUARDING YOUR VISION

Whenever you are on the range, as a shooter or a spectator, you have to wear protective eye glasses! With bullets flying at well over 1300 ft/sec, there is always a risk of ricochets or debris in the air. Protect your eyes!

Double-Alpha offers a wide assortment of shooting-optic sets, some including multiple lenses for all possible light conditions. Several sets come with multiple frames, enabling faster and easier transitions as needed.

The **DAA Optics** line of products has something for everyone: from our economically priced model **Lima** set with its flexible frame and 4-lens choice, through our popular long-running **Alpha** model 5-lens set, our **tactical Bravo-Elite set** with three complete pairs of glasses, and this year, the new, cool-looking **Tango** model.

Double-Alpha is also pleased to offer some select models of shooting sets from **Rudy Project**, including the **RYDON Shooting/Hunting** and the **AirBlast**.

And most recently, Double-Alpha has teamed up with **Pilla Sport**, a US manufacturer of high-end optics. Pilla is world-renowned for offering the **ultimate in lens technology from ZEISS**.

We offer the **Panther X7** model with an assortment of **Solid or Progressive Tactical model lenses** at special pricing for the action shooting sector.

# TARGETS SOMETHING TO AIM **AT**

A wise man once said, "You can gain three years of experience in one year of training or just one year experience in three years of training. It all depends on how much you experience your training!" Training with attention to quality and correct performance is crucial. This can only be achieved by using the correct targets, and scoring them as you practice.

Double-Alpha offers an assortment of targets and target accessories to help you spend your time more effectively when training, and to gain more experience from each session.

Our unique **DAA Steel Setter** is a portable, battery-powered, weather-proof system that fits behind a full size (or mini) popper and resets the steel after a preset delay or by the use of remote control. A perfect solution when shooting long distance, as no one needs to approach the steel to reset it.

Our **spring-loaded steel plates** are a fast and efficient way to get a good visual confirmation of the hit, and reset the target for the next run. Simple and effective, these are available in round or square plate configuration.

DAA is proud to offer an assortment of **NewBold shoot-through self-setting targets**, perfect for indoor use where steel is often not permitted. The bullet travels through the target's special rubber material, transferring enough energy to knock it down without sending off bullet fragments or ricochets.

# PISTOL PARTS AND UPGRADES PUSHING THE ENVELOPE

Hi-level IPSC shooting is all about striving for perfection. And this perfection needs to include the pistol's fit and feel in the hand. Getting your gear to fit "just right" can often be the key to a good, consistent and repeatable performance.

Double-Alpha offers a **wide array of accessories and parts** designed to improve on the factory-configured setup of your pistol. From **custom grips for CZs and 1911s**, **adjustable thumb rests and supports**, to our **Grip Customization Kit**, we strive to help you achieve that perfect fit.

Our **ambidextrous 1911/2011 safeties with shield** have become the favorite of many leading smiths, and are even used by a few gun manufacturers on some of their race gun models.

We offer a wide assortment of **magazine upgrade parts**, from our **aluminum 2011 and SIG base pads** through our **+5 AR-15 base pad**. Not forgetting of course, our **custom hi-capacity springs and followers for the 2011**.

We understand what you need your gun to do in the field of play, and we know how to design and manufacture the parts that will help you reach your shooting goals!

# MAGLULA PRODUCTS AN EASIER WAY TO LOAD MAGS

Since 2001, **Maglula Ltd.** Israel has been manufacturing **professional military-grade tools for loading and unloading magazines.** Maglula products save valuable time at the range, field and armory, and prevent discomfort and pain associated with loading and unloading magazines. They also prevent damage to the magazine lips, thereby reducing weapon jams. Maglula currently holds nine US patents associated with magazine loaders, and are continuously innovating new designs and new ways to make it easier for us all to load our magazines and get to the shooting.

The **UpLULA** is the most popular of the pistol magazine loaders. This clever design works on practically any and all 9mm and up magazines, and is compact and simple to use. Once you give an UpLULA a try, you'll never want to load magazines without one. Available in Black and in a wide array of bright colors such as Yellow, Orange and Purple.

The **Maglula BenchLoader** is the fastest way to load 30 rounds of 5.56 ammo into an AR-15 magazine. Effortless and quick, it makes high-volume loading of these mags easy. The heavy-duty industrial structure promises this product will serve you for life.

Many other loading and unloading solutions are available, ranging from **10/22 products through gun-specific LULAs.**

More than 16,000 5-star online customer reviews are a testament to customer satisfaction with the ingenuity, quality, and durability of the Maglula range of products. Double-Alpha Academy is proud to be its largest European Distributor. We carry the complete Maglula range for pistol and rifle use.

# SIGHTS ACCURACY IS THE NAME OF THE GAME

Making that perfect shot, consistently and at speed, requires flawless synergy between skill and equipment. Having the correct weapon platform topped by suitable, well-performing optics is a must.

Double-Alpha is proud to offer an assortment of the best **Red Dot Sights** now leading the way in the Open and the Production Optics Divisions. From the **Aimpoint Micro** sight, through the **C-More RTS2** and full-size **Railway C-More**, we offer the best quality products on the market.

Getting these hi-end optics to work well on an IPSC pistol requires the right type of mount, and Double-Alpha designs and manufactures some of the best mounts available for pistol use. Many of our mount designs incorporate adjustable thumb paddles for increased recoil control and blast-shields to protect your optics.

# CLEANING SOLVENTS AND MATERIALS

In addition to the right tools for cleaning, you also need the best solvents and oils to maintain your firearms.

Double-Alpha is pleased to offer a selection of leading products from **Shooter's Choice**, including their world-famous **FP-10** general purpose oil, **All Weather Grease** and the fantastic water-based Aqua cleaners.

We also offer hi-end oils and grease from **Gun Butter**, **Brian Enos's SLIDE-GLIDE** and specialized cleaners from **SEAL 1**.

# DAA CLEANING PRODUCTS

## THE TOOLS YOU NEED TO MAINTAIN YOUR GUNS

If you are serious about your shooting and are sending many rounds downrange each week, you will know how critically important good gun-maintenance practices are for keeping your equipment in top shape.

Double-Alpha offers a **wide assortment of cleaning kits** and products to make this task easier, taking into account your needs as a traveling competitor who has to maintain his guns on the road.

Our **Range Ready Cleaning Kit** has been a popular choice for almost ten years. With the large rubberized fold-out cleaning mat and pistol-insert sleeve design, it's perfect for use on the road. It includes a multitude of tools and cleaning aids and is practical and portable.

More recently we added several new kits, like our **DAA Universal Cleaning Kit** for maintaining the barrels of many popular pistol and rifle calibers. Everything you might need is packed in a tactical nylon pouch.

Other cleaning tools available from DAA include plastic hooks, utility brushes in assorted materials, custom magazine brushes, cleaning mats, and more.

# DAA CLOTHING AND PROTECTIVE GEAR - WE'VE GOT YOU COVERED!

Having fun on the range is not only about shooting well, it's also about being well equipped and looking good! Here too, DAA has you covered!

Our team and sponsored shooters have accumulated decades of experience and we put this combined knowledge to work when designing our clothing and protective gear. Items from DAA are especially designed by IPSC shooters for IPSC shooters, taking into account the specific requirements of our game. When it comes to elbow and knee pads there are endless designs available. For IPSC shooting you will find no better choice than DAA!

Our **clothing items** have been tailor-made for action shooting. From the flexible durable **Shotac Pants**, with their wide belt loops and double-layered knee fabric, through the practical **Shotac Shooting Vest**, the DAA clothing items will help you achieve your best performance in any weather conditions.

And let's not forget our branded clothing items, making it clear you're part of the DAA Team! Fly your DAA colors on and off the range in **Microfiber Team Shirts**, **Tri-Blend T's**, **Arm Sleeves** and **Caps**. All available in our online store.
